

The biliary duct stents are preloaded on the TTS (through-the-scope) delivery system and are placed through the working channel of the endoscope. The delivery system is introduced into the biliary duct through the papilla under visual and x-ray control. The biliary duct stents are available without, with partially and with complete silicone covering. The stable guidance of the new braided delivery system guarantees a precise and reliable stent placement under endoscopic view and under x-ray control.

- Stent without, with partially or complete silicone covering
- Atraumatic, rounded ends
- Memory effect of nitinol material – high radial force and flexibility
- Radiopaque tantalum markers
- Delivery system

Length 1800 mm, TTS

Stent without and with partially covering Ø 2,8 mm / 8.5 French

Stent with complete covering Ø 3,3 mm / 10 French

Accepts guide wire 0.035 inch
