

The new self-expandable nitinol y carina stent is used to bridge benign or malignant stenosis in the trachea and in the right or left bronchus. The new delivery system with the one-threat mechanism per branch makes the implantation of the y carina stent simple and easy. Leufen Medical offers a huge variety of self-expandable y carina stents with diameters in 16, 18 and 20 mm and lengths in 40 and 50 mm (trachea). The length of the right bronchus arm is well-graded into 15 and 20 mm, in diameter of 12 and 14 mm, whereof 5 mm are not covered, to prevent a closure of the upper right lobe.

- Stent with complete PU covering / except right Bronchus 5 mm without covering
- Anatomical correct conical design
- Atraumatic, rounded ends
- Memory effect of nitinol material – high radial force and flexibility
- 5 radiopaque tantalum marker
- Delivery system

Length 600 mm, OTW
 Ø 8 mm / 24 French
 Accepts guide wire 0.035 inch

aerstent · y carina · complete PU covered (except right Bronchus 5 mm without covering)
